

Equipment & Software

Software:

- Weather Stations
- Smart Phones (iPhone, Samsung, Motorola, LG, Nokia, ...)
- NCM (Net Control Manager)

APRS

Digipeaters - A device that receives APRS packets

By doing so, it ensures that the APRS packets can:

- Reach more distant stations or other digipeaters
- Enhance network coverage and reliability

Digipeaters play a crucial role in the APRS infrastructure by:

- Allowing data to be relayed across greater distances
- Enabling efficient real-time tracking, messaging, and information sharing within the amateur radio community.
