

# From Packet Radio to APRS

APRS has evolved into a real-time, global digital communications network

- It offers a dynamic platform where operators can:
  - Monitor local ham activity
  - Access announcements, bulletins, messages, alerts, and weather information
- The system provides an interactive map displaying various ham radio elements, including:
  - Objects, frequencies, satellites, nets, meetings, and Hamfests

Today, APRS has a strong presence in most countries with active Amateur Radio communities.

# Fun with APRS

## Activities & Technologies

- Personal tracking during outdoor activities
- APRStt - Touch Tones
- PSAT & Other Satellites
- APRSThursday Net
- Weather Station Reporting
- Digipeaters & I-Gates to Extend Coverage
- Chasing High Altitude & Pico Balloons - GPSL
