APRS
Information Services

- ANSRVR — Allows you to quietly remain joined to a group. A great way to send announcements to people interested in the same things.

- APRSPH — Is also a bot that can be used to run queries, commands, and exchange messages with SMS network*.

- APSPOT — Provides a one-stop shop or self-spotting activations via APRS, to a myriad of activity based spotting systems.

- CQSRVR — A server to facilitate initial contact between APRS stations worldwide with similar interests. Requires a unique callsign-SSID to use.

- WHO-IS, WHO-15 — Callsign Lookup

APRS
Information Services cont.

- MPAD — A multi-purpose daemon (WX/METAR/TAF/CWOP reports, satellite & other celestial data, find the nearest repeater to my position, user coordinates & distance etc. …)

- ISS (SATSRV) — When ISS receives your query (via the APRS-IS), it will calculate the current or next pass of the ISS for an observer at your station's last beaconed position (it will say "Please beacon Position" if it doesn't know where you are). The response depends on when the pass begins.

- WTSAPP — A Gateway designed to allow Licensed Radio Amateurs around the world reach their lovedonesfromtheirradiosbyusingAPRSmessages.

- WXBOT — WxBot is an APRS-IS listener app that listens for messages and responds with a brief US National Weather Service forecast.
